JEEVES

Partnerships channel · proposal by Daniel Álvarez

Synthetic data. No figure comes from Jeeves. 11,404 deals and 26,060 account-months generated to show the model structure and the cleanup engine.

The same quarter has two defensible win rates. Before building the dashboard, someone has to decide which one gets reported.

32.9%

Against closed deals only

Denominator: won plus lost. This is what HubSpot returns by default and what almost always gets presented to leadership.

27.2%

Counting abandoned deals

Adds the 1,037 referrals open more than 180 days that nobody marked lost. In practice they are already lost.

The gap is **5.7 points**. If a partner is evaluated on the first number while the credit team plans on the second, the two functions are looking at different businesses.

$54.2M	$848k	1.57%	1,114	$97.8M	104d	59.8%
Card spend, 2026-08	Modelled net revenue	Net take rate on spend	Accounts transacting	Limit in live pipeline (838 deals)	Median referral to close	Of all deals via partners

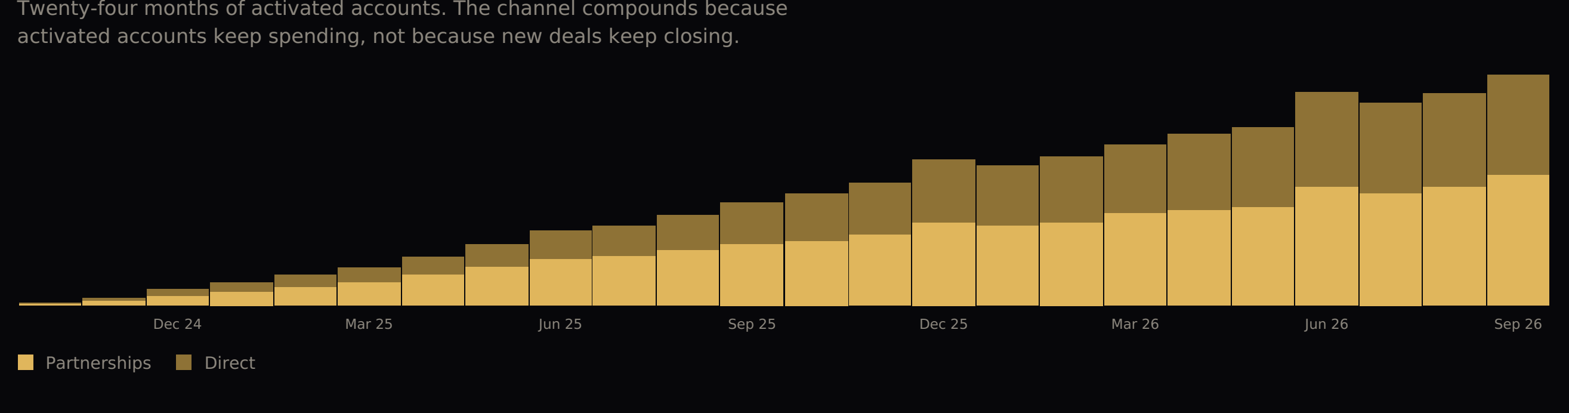
Where the revenue actually comes from

Nothing here is billed to the client. Revenue is a take rate on what the account spends, so the chain has to end in volume, not in signature. Rates used: 1.45% interchange, 0.90% FX spread on cross-border spend, 2.00% monthly on revolved balances, less 0.45% of spend in network, processing and rewards.

Card spend	$54.2M
Interchange	$786k
FX spread	$82k
Financing	$224k
Network, processing, rewards	-$244k
Net revenue	**$848k**

Card spend by month

Twenty-four months of activated accounts. The channel compounds because activated accounts keep spending, not because new deals keep closing.



Channel funnel

Underwriting is where most referrals fall out. It is the one step the rep does not control, which is why it belongs on its own line.

Stage	Count	
Referral Received	6,815	
Qualified	6,565	96.3% of prior · 96.3% of top
KYB / Underwriting	6,096	92.9% of prior · 89.4% of top
Credit Approved	5,586	91.6% of prior · 82.0% of top
Contract Sent	5,182	92.8% of prior · 76.0% of top
Closed Won	4,940	95.3% of prior · 72.5% of top

Spend retention by activation cohort

Average monthly spend per surviving account, indexed to its first month. Above 100 means accounts are spending more than they did at activation. This is the number that decides whether a partner is worth its commission.

Cohort	M0	M1	M2	M3	M4	M5	M6	M7	M8	M9	M10	M11	M12
2025Q1 271 accounts	100	116	129	146	165	171	181	192	207	207	212	208	197
2025Q2 323 accounts	100	122	136	139	151	164	181	202	215	200	201	202	197
2025Q3 349 accounts	100	115	130	147	160	178	184	203	216	234	231	232	224
2025Q4 352 accounts	100	114	128	139	150	162	187	203	219	212	197	188	
2026Q1 341 accounts	100	117	133	154	170	190	196	222	229				
2026Q2 315 accounts	100	118	130	147	158	174							
2026Q3 469 accounts	100	119	136										

Markets

17 countries, 12 currencies. Each amount is converted using the deal's own rate, not one month-end rate. The lighter bar is the share partners bring in.

Country	Accounts	Spend	Net rev	Via partners

Performance by partner type

The gap column shows how much each type's reading moves with the definition. Where the gap is wide, it is the CRM hygiene that is worse, not necessarily the partner.

Type	Referrals	Won	WR closed	WR conservative	Gap	Cycle	Spend
Accounting firms	1,604	364	31.1%	25.7%	+5.4	107d	$14.9M
Banks & neobanks	987	253	34.3%	28.6%	+5.7	106d	$10.0M

peter.nakamura NORTAM · 17 mo tenure	$422k	$141k		33.3%

Average attainment by tenure. The ramp is the reason a hiring plan cannot be read off headcount alone.

80.9%	151.5%	116.5%	104.8%
0-6 months · 1 reps	6-12 months · 3 reps	1-2 years · 4 reps	2+ years · 5 reps

By segment

Segment	Refs	WR	Cycle	Per account	Spend
Startup	2,169	30.4%	107d	$5k	$1.7M
SMB	2,743	33.9%	101d	$20k	$9.5M
Mid-Market	1,453	33.5%	107d	$87k	$20.4M
Enterprise	450	37.1%	108d	$298k	$22.6M

By product line

Product	Accounts	Spend	Net rev	Take
Corporate cards	604	$29.2M	$443k	1.51%
Cards + cross-border payments	321	$15.2M	$249k	1.64%
Cards + credit line	189	$9.7M	$156k	1.61%

Why referrals are lost

The largest bar should worry the team: a loss with no reason recorded cannot be coached, and cannot be fed back to the partner who sent it.

Reason	Count
Unresponsive	487
Country not supported	485
Pricing	468
Failed underwriting	465
No budget / not now	457
Compliance / KYB docs	436
Went with competitor	427
Not recorded	88

What the cleanup engine found

Of 12,180 raw deal rows, 776 left the reportable universe and 11,404 remained. Quarantining a deal also removes its spend history: 1,414 account-months and $48.8M of spend came out with them. Nothing is dropped silently — every affected row keeps the rule that touched it.

R01 Test record 190
quarantined
Name matches the test-pattern dictionary

R02 Duplicate deal 180
quarantined
Same account, amount and country entered <=7 days apart

R03 Stage vs closed flag 175
corrected
dealstage wins over hs_is_closed_won; the flag was rewritten

R04 Won with no amount 150
quarantined
Closed Won with amount <= 0: cannot enter the revenue numerator

R05 FX not applied 213
corrected
Reconverted using the reference FX table; original value retained

R06 USD amount blank 220
corrected
Derived amount_in_home_currency from the local amount

R07 Currency vs country 138
flagged
May be legitimate (client bills in USD): flagged, not corrected

R08 Close date before create date 256
quarantined
Impossible date: breaks every sales-cycle calculation

R09 Stale open deal 1,970
flagged
Open for more than 180 days; reported separately from live pipeline

R10 Partner name not normalized 1,634
corrected
Unified spacing, casing and legal suffixes

R11 Unattributed partnership 315
flagged
Enters the channel but cannot be attributed to a partner

R12 No owner assigned 310
flagged
Without an owner there is no accountability and no attainment calculation

R13 Lost with no reason 140
flagged
Closed Lost with no reason: the loss cannot be coached or fed back to the partner

R14 Limit outside segment band 95
flagged
Approved limit outside the plausible band for its segment

R15 Orphaned usage row 1,414
quarantined
Monthly spend tied to a deal that failed validation

What I would ask before building this for real

A dashboard inherits the decisions nobody made. These four are still open, and each one moves every number above.

Win rate definition
a business decision, not a data one
After how many days does an open referral count as lost? Without that rule every function reports a different number and all of them are right.

Channel attribution
315 cases with no partner
If a partner refers and the client closes through direct sales three months later, whose deal is it? The answer decides whether the channel looks profitable.

FX timing
12 currencies
Convert at the deal-date rate or the month-end rate? In COP, ARS and BRL the difference is material, and it is not an accounting detail.

What a partner is paid on
referrals, activations or spend
Paying on referrals rewards volume, on activations rewards quality, on spend rewards patience. The cohort table above argues for the third.

Built on synthetic data generated for this exercise: 11,404 deals, 26,060 account-months, 17 countries, 12 currencies. Cleanup engine in Python, fifteen rules, auditable output. This HTML mirrors the structure I would carry into Tableau or Power BI.
